22) Report from D.C Chitaldrug received on 17.2.48

(P.U.D

Letter No A6-60/47-48 dated the 15th February 1948 from the Deputy Commissioner, Chitaldrug District furnishing his report on the inadequacy of water supply to Harihar town, with proposals for improving the same

23) The Deputy Commissioner, Chitaldrug, states that the President, Harihar Town Municipal Council has furnished a note on the subject of water supply to Harihar town in November 1947, along with the address presented to the Minister for Ltg. Municipalities & Mufassal

(Flag Z

Inadequacy of water supply in Stanhope town

Flag Z) and he writes reference to the same.
It is seen therefrom that the Stanhope Town Municipality had an independent source of water supply from 1904 to 1937 and that as the machinery became old, it entered into an agreement with the Davangere M L Bd for supply of 60000 gallons of water at Rs 0-3-0 per 1000 gallons supplied per day from the Davangere Water Works and that this arrangement is in force even now since 1937, both Stanhope & Davangere towns have expanded considerably and the water supply to Stanhope from Davangere Water Works has become inadequate

24) The D C reports in this connection that he has instructed the Chief Officer of Davangere Mcty for supplying water to Stanhope for 2 hours more but this too is inadequate the Engineer suggests that the only course left open is for the Stanhope Mcty to purchase water from the Military Water Works, now under the control of the Sanitary Engineer, or to own these works itself The D-C has

Flags X & Y) enclosed copies of correspondence between

Inadequacy of water supply in Harihar town

himself & the Sanitary Engineer on the subject. It is seen therefrom that the cost of the water works is Rs 3 11 lakhs including cost of pipe lines etc and that the annual maintenance charges will be Rs 42 000/- (which works out to roughly 0-12-0 per 1000 gallons) The Sanitary Engineer has also issued instructions to the Asst Engr. Chitaldrug to prepare the existing distribution plans of Harihar town & also a detailed estimate for necessary improvements It is estimated that 2 lakhs of gallons can be pumped per day from Military water works & that these should supply water to Messrs Karlopans the Railways also If the water works are used for Harihar water supply, the portion of cost to be borne by the Harihar M C is reported to come to Rs 27,825/- per annum which works out to Rs 0-9-6 per 1000 gallons The Sanitary Engr has promised to visit Harihar in February 48 25) About the cost of water, the D C states that at present Harihar M C is paying Davangere M C at 0-5-0 per 1000 gallons & that he addresses the Sanitary Engr also to charge Rs as p 0-5-0 per 1000 gallons per day as a special case and has also requested him to push through the scheme as early as possible He adds that a further

To

MOHAMED SHERIFF, ESQUIRE, B A ,LL B ,

MINISTER FOR PUBLIC HEALTH AND EXCISE,

in MYSORE, B A N G A L O R E

Camp C H I T A L D R U G

Sir,

WE, the Members of the Harihar Town Municipal Council feel it a great pleasure to submit our falicitations to you on the occasion of your entry as a Minister in the New Cabinet of Responsible Government of our State

WE have now the unique privilege of representing our grievances before you which we hope will not be denied to us

The Municipal Council have numerous wants of improvement of their Town and they leaving asidex all other wants only desire to stress on your goodself the first and the foremost necessity of good and adequate drinking water supply to the Town which naturally heads the list of improvement of a Town

Eversince our water works broke down in the year 1937, we are depending upon the supply to this Town from the Davangere Municipality The supply is inadequate,costly and we cannot depend indefinitely upon the present arrangement A note on the History of water supply is enclosed for kind perusal

We, humbly pray Government to kindly order the Water Works now in possession of the Sanitary Department to be handed-over to the Municipal Council free of cost considering its limited finances

We earnestly hope that this our humble request will receive your kind consideration and immediate relief

We pray God to bestow on you His choicest blessings

P.T.O

blessings and strength to ever serve the State for its prosperity.

We Remain Sir,
Yours Obediently,

M Mahalingappa

Harihar.
15-11-1947

PRESIDENT,
TOWN MUNICIPAL COUNCIL, HARIHAR.

MEMBERS OF THE COUNCIL.

NOTE ON WATER SUPPLY TO HARIHAR TOWN

Old arrangement:-

Harihar town had an independent water supply of its own from about the year 1904. The source of supply having been the river Thungabhadra. The water from this was led into a well by means of a duct from which it was lifted by machinery and discharged through a rising main laid in the centre of the town to reservoir (Low level) constructed above ground level at the highest point near Musafirkhana. The machinery last installed consisted of an oil engine set and the water was passed through a set of pressure jewel filters to improve the quality. Since the rising main itself was used as the distribution main, the supply at the higher levels became scanty particularly when the number of house connections at the lower levels increased

History of present arrangment.

The machinery installed for the water works broke down in the year 1937 and some other arrangement for water supply to the town had to be done immediately.

The water supply of to Davangere Town is also drawn from the above River Tungabhadra and the pumping station is located close to that of the Harihar Water supply to that the immediate and easiest means of affording relief to Harihar Town was by drawing the required supply from the rising main of Davangere. The Municipal Council of Harihar therefore entered into an agreement with the Davangere Municipality for purchasing water at five annas per thousand gallons and the water is being drawn from the mains of Davangere water works at the circle in Bangalore-Dharwar Road into the reservoir direct (just above ground level) and then distributed to the town by sub-mains This arrange--ment is in force even today. This reservoir near the Musafirkhana is no doubt at the highest point so far as the old town is concerned. Extensions have sprung up between this and the Railway line and since the ground level at the extension is about the same as that of the reservoir it was found very difficult to maintain an adequate supply of water To tide over the

over the cry of the Public for adequate supply proposals were submitted to the Government for sanctioning an independent water supply proposals were submitted to the Government for sanctioning an independent water supply scheme to the Town. As this scheme was found too costly an alternative scheme was sanctioned by the Government at a cost of rupees twenty four thousands (Rs.24,000) to be met in equal shares by Government and the Municipality. This scheme of improvement meant 1) Construction of an elevated reservoir of 20,000 gallons capacity 2) overhauling the distribution system 3) pipe connection to the elevated reservoir from the Davangere mains. This work of improvements was completed by the Bureau of Sanitary Department two years back. Even after this the supply has not been improved and the roar of the Public for better supply is increasing day by day. The Davangere Municipality was from the beginning giving supply of water for six hours daily which meant 60,000 gallons per day but they have reduced the supply to four hours from about April 1946 on ground of great ✈ for water at Davangere. The population of Harihar Town is now doubled in number over the Census figure of 1941 and has increased to 16,000. This works to only 2½ gallons per day per head. The supply is for limited hours and not sufficient to meet even the ordinary demand. The council cannot depend on the present arrange--ment indefinitely as it is likely that the Davangere Municipality may cut off supply to Harihar Town at any time when they feel inadequacy of water supply in any portion of their town.

To tide over these difficulties the Municipal Council approached the Government to move the Military authorities to handover their machinery of water works (stationed in the premises of our water works) at a reasonable cost of the Municipality and to make a free grant of water tanks, pump house and bther permanent fixtures in favour of the Municipality. The cost of the machinery proper was estimated at Rs.30,000. The prayer of the Council have had no avail and the said military water works were taken possession of by the Mysore Government on 5-5-1947. The Bureau of Sanitary Department is nowsupplying

supplying water to the Mysore Military camps and the Mysore Kirloskar at Harihar. The Sanitary Engineer who was addressed in matter of arranging immediate water supply to this town has intimated that the consolidated estimate for supplying water to Harihar Town, the Kirloskar, the Military and the Railways is being got up and will be sent for acceptance. The receipt of estimate is awaited

Conclusion:-

There is no other go for the Municipality than to have its own independent supply by approaching Government to kindly transfer the charge of the water works under them to the Municipality free of cost considering the limited finances of the Municipality.

PRESIDENT,
TOWN MUNICIPAL COUNCIL, HARIHAR

MEMBERS OF THE COUNCIL

NOTE ON WATER SUPPLY TO HARIHAR TOWN

Old arrangement -

Harihar town had an independent water supply of its own from about the year 1904 the source of supply having been the river Thungabhadra The water from this was led into a well by means of a duct from which it was lifted by machinery and discharged through a rising main laid in the centre of the town to reservoir (Low level) constructed above ground level at the highest point near Musafirkhana The machinery last installed consisted of an oil engine set and the water was passed through a set of pressure jewel filters to improve the quality Since the rising main itself was used as the distribution main, the supply at the higher levels became scanty particularly when the number of house connections at the lower levels increased

History of present arrangment

The machinery installed for the water works broke down in the year 1937 and some other arrangement for water supply to the town had to be done immediately.

The water supply of to Davangere Town is also drawn from the above River Tungabhadra and the pumping station is located close to that of the Harihar Water supply to that the immediate and easiest means of affording relief to Harihar Town was by drawing the required supply from the rising main of Davangere The Municipal Council of Harihar therefore entered into an agreement with the Davangere Municipality for purchasing water at five annas per thousand gallons and the water is being drawn from the mains of Davangere water works at the circle in Bangalore-Dharwar Road into the reservoir direct (just above ground level) and then distributed to the town by sub-mains This arrange-ment is in force even today This reservoir near the Musafirkhana is no doubt at the highest point so far as the old town is concerned Extensions have sprung up between this and the Railway line and since the ground level at the extension is about the same as that of the reservoir it was found very difficult to maintain an adequate supply of water To tide over

over the cry of the Public for adequate supply proposals were submitted to the Government for sanctioning an independent water supply proposals were submitted to the Government for sanctioning an independent water supply scheme to the Town As this scheme was found too costly an alternative scheme was sanctioned by the Government at a cost of rupees twenty four thousands (Rs. 24,000 to be met in equal shares by Government and the Municipality This scheme of improvement meant 1) Construction of an elevated reservoir of 20,000 gallons capacity 2) overhauling the distributi system 3) pipe connection to the elevated reservoir from the Davangere mains This work of improvements was completed by the Bureau of Sanitary Department two years back Even after this the supply has not been improved and the roar of the Public for better supply is increasing day by day The Davangere Municipality was from the beginning giving supply of water for six hours daily which meant 60,000 gallons per day but they have reduced the supply to four hours from about April 1946 on greund of great for water at Davangere The population of Harihar Town is now doubled in number over the Census figure of 1941 and has increased to 16,000 This works to only 2¼ gallons per day per head The supply is for limited hours and not sufficient to meet even the ordinary demand The council cannot depend on the present arrange--ment indefinitely as it is likely that the Davangere Municipality may cut off supply to Harihar Town at any time when they feel inadequacy of water supply in any portion of their town

To tide over these difficulties the Municipal Council approached the Government to move the Military authorities to handover their machinery of water works (stationed in the premises of our water works) at a reasonable cost of the Municipality and to make a free grant of water tanks, pump house and hther permanent fixtures in favour of the Municipality The cost of the machinery proper was estimated at Rs 30,000 The prayer of the Council have had no avail and the said military water works were taken possession of by the Mysore Government on 5-5-1947 The Bureau of Sanitary Department is now supplying

supplying water to the Mysore Military camps and the Mysore Kirloskar at Harihar The Sanitary Engineer who was addressed in matter of arranging immediate water supply to this town has intimated that the consolidated estimate for supplying water to Harihar Town, the Kirloskar, the Military and the Railways is being got up and will be sent for acceptance The receipt of estimate is awaited

Conclusion -

There is no other go for the Municipality than to have its own independent supply by approaching Government to kindly transfer the charge of the water works under them to the Municipality free of cost considering - the limited finances of the Municipality

OFFICE OF THE MINISTER FOR LOCAL SELF GOVERNMENT
No 514
D 10/1

Respected sir,

subject Complaint against Harihar Town Municipality regarding water supply and santation.

we the undersinged ladies on behalf of the public of this place residing in Harihareswar temple premises beg to bring to your kind information the following few lines for your kind consideration and favourable orders

Regarding water supply by the municipality:- The water supply in this place is absolutely very scarcity and the town municipality is not supplying properly. The tap connection is very poor. The municipality is supplying water once in a day only during morning from 9 30 to 12 AM and within the period of about 3 hours the whole temple premises has to contented with the only one tap. The municipality is not ableto increase the tap even though they are in a position. we feel much, the action of town municipality creating trouble to the public having the god given river Tungabhadra Inspite of our several representation, the town municipality did not care to our request we the ladies of the town Harihar Town has clearly stated the fact and your honour, to kindly consider our grievances and do favour at your earliest possible

Regarding sanitation. we be to inform that there are no seperate laterin to all the houses as the house plans are such The municipality is not caring for the sanitation there is only one public latrin whihc is not properly maintained and perhaps the municipality is getting it cleaned only once in a week several representation on the above two subjects to the municipality by us proved in vain. we are very much disguested with the action of the town municiplity therfore, we request you to kindly enquire in the matter and do favour

for which act of kindness we shall be ever grteffull

An early reply is solicted.

we have the honour,
sir,
Yours faithfully
for Harihar Town public ladies

Respected Sir,

Ref. water supply.

In persuance of the resolutions unanimously carried carried out in a public meeting held on the 5th inst, I have been authorised to take a deputation to your honour to submit the harships suffered by the residents of Harihar of the scarcity of water. Though our Harihar town has got a river flowing beside, no adequate water supply has been made from the last 20 years. The Municipality had one poor water works but was forced to stop it and afterwards an arrangements was done with the Davangere water works for supply of water to our town. But now the supply of water is so scarce, it is dire necessity to see that the military water works existing here, should be immidiately handed over to the municipality which is prepared to subscribe for it.

The matter has been repeatedly represented to the Dewan and the concerned authorities but hitherto no effective measures has been taken.

My deputation will arrive Bangalore on the 9th instant and I hope you will extend your sympathy and support for our cause and take trouble to redress our grievances.

A copy of the resolution of the public meeting is herwith enclosed for your kind information.

No.M6 60/47-48 Office of the Deputy Commissioner,
Chitaldrug District,
Dated Camp Davangere, 15th February 1948.

To

Syed Abdul Aleem, Esquire, B A,
Secretary to the Government of Mysore,
Revenue Department, Bangalore

Sir,

Subject - Improving water supply to Harihar town

With reference to your D O letter No L 13281 dated 7th February 1948 on the above subject, I have the honour to state that the President and the Members of the Municipal Council, Han har - presented an address to the Minister for City Municipalities and Muzrai, during the time of his kind visit to Harihar town on - 8-11-1947, representing that (1) they are depending upon the supply of water to the town from the Davangere Water Works at Harihar, the supply of which is quite inadequate and costly and (2) - requested that the water works at Harihar which is under the control of the Sanitary Engineer may be handed over to the -- Municipal Council, free of cost, considering the poor finances of the Municipality

2. The President of the Municipality has furnished a detailed note on water supply along with the address presented to the Minister on 8-11-1947, which is self explanatory. As per this note it is seen (1) that the Municipality had an - independent source of water supply from about the year 1904 to 1937 As the machinery installed for water xxpp works became out of order in 1937, the Municipal Council, Harihar entered into an agreement with the Municipal Council, Davangere for the supply of 60,000 gallons of water at the rate of 0-5-0 per thousand gallons of water supplied per day from the Davangere

Davangere Water Works to the Harihar Municipality. This arrangement is in force till to-day. Since the year 1937, the town has extended on all the sides and the population has also increased. The water supplied is naturally quite inadequate to satisfy the needs of the town The Municipal Council, Harihar is making - pressing representations to Government to kindly hand over to it the water works which is now under the control of the Sanitary Engineer.

3. The water trouble in Harihar town is very greatly felt. I have instructed the Chief Officer of Davangere Municipality for the supply of water to Harihar town for two hours more. But yet the supply of water is not adequate though the water supply is improved to a little extent. It is also not possible for the -- Davangere Municipality to supply adequate water to Harihar as it has to supply water to Davangere which is growing rapidly on all the sides and its population is also on the increase. The only course left open to the Harihar Municipality is to purchase water from the Military water works now under the control of the -- Sanitary Engineer or to own it itself.

4. I made a reference to the Sanitary Engineer in my letter No A6.C.40 dated 18-11-1947 (1) to hand over the old water works orginally belonging to Harihar Municipality, if there is no - objection, (2) to intimate the cost of the Military water works which is now under the control of the Sanitary Division, (3) to examine the question and to furnish detailed plans and estimate for the improvement of the distribution mains, water supply tanks etc , and to furnish a comprehensive scheme In response to this letter, the Sanitary Engineer in his letter No 524 dated 29-11-1947 has intimated that (1) the total cost of the Military water works would be 3.11 lakhs including the cost of pipe lines

lines etc., (2) the A M charges will be Rs 42,000/- which roughly works out to Rs 0-12-0 per 1000 gallons of water. He further intimates (i) that he has requested the Assistant Engineer at Chitaldrug to get the existing distribution plan of the town and to prepare a detailed estimate for the necessary improvements and (ii) that 2 lakhs of gallons of water can be pumped out per day from the Military water works and (3) it has to supply water to the Military camp, the Kirloskars, the Railway and the Harihar town.

5. I requested the Sanitary Engineer in my D O letter No A6 50/47-48 dated 26-1-1948 to visit Harihar and to give immediate relief to the inhabitants of Harihar in the matter of water supply The Sanitary Engineer in his letter No. 1012 dated 5-2-1948 addressed to the Chief Engineer for Irrigation has intimated that (1) the portion of cost to be met by the Harihar Municipality will be - Rs 27,825/- per annum which works out to 0-9-6 per 1000 gallons of water and that he would visit Harihar during February 1948.

6 The Harihar Municipality is purchasing water from the Davangere Water works at the rate of 0-5-0 per 1000 gallons of water whereas the Sanitary Engineer intimates that the rate of supply of water from the Military Water Works will be 0-9-6 per 1000 gallons. This rate is rather very high I have requested the Sanitary Engineer to intimate whether the rate can be reduced to 0-5-0 per 1000 gallons of water as is done by the Davangere Municipality Immediate relief has to be given to the inhabitants of Harihar town in providing adequate supply of water I request you to kindly move the Government to address the Sanitary - Engineer to arrange for the supply of water from the Military Water Works to the Harihar town at the rate of 0-5-0 per 1000 gallons of water per day as a special case, till the matter is finally -

finally decided by Government.

I have again reminded the Sanitary Engineer to get through the plans and estimates expeditiously and to see that immediate relief is given to the inhabitants of Harihar town in the matter of water supply. Further communication will be made soon after the proposals are received from the Sanitary Engineer and the President of Harihar Municipality in the matter. Copies of letters dated 29-11-1947 and 5-2-1948 received from the Sanitary Engineer are also enclosed for kind reference.

I have the honour to be,
Sir,
Your most obedient servant,

Deputy Commissioner,
Chitaldrug District.

mns/3

Letter No.524 dated 29-11-1947 from the Sanitary Engineer, Bureau of Sanitary Engineering, Bangalore, to theDeputy Commissioner, Chitaldrug District.

Subject - Water supply to Harihar town

With reference to your letter No 46 C 40/45-46 dated 13-11-47 on the above subject, I have the honour to state as follows -

The machinery that have been taken over by the Government of Mysore from the Military are entirely different from the machinery of the old water works belonging to Harihar Municipality. A number of improvements to the water works have also been done by way of constructing settling tanks, gravity hand wash filters, and pure water tanks etc

It is true that the water supply to the town from the Davangere water works at Harihar is inadequate, as only about 60,000 gallons of water per day are being given to Harihar town from Davangere - water works

The cost of the Military Water works with the allied pipelines etc , as taken over by this Department is 2.81 lakhs. A number of further improvements to the works costing about Rs 30,000/- are being carried out Thus the total cost would be 3.11 lakhs The approximate cost of the 4 M charges will be Rs 42,000/- which roughly works to Re.0-12-0 per 1000 gallons of pumpage.

Regarding the distribution lines of the town, I have requested my Assistant Engineer at Chitaldrug to get the existing distribution plan of the town and prepare a detailed estimate for the improvements necessary

In this connection, it has to be stated that the existing pumping units at Harihar Military Water works can pump about 2 lakhs of gallons of water per day and water has to be supplied to the - Military Camp, the Kirloskars and the Railway in addition to Harihar

Harihar town. In case, the Municipality takes over the management, the requirements of the other three concerns, have to be met with by the Municipality.

Regarding the handing over of the water works to the Municipality, free of cost, the matter as you are kindly aware, has to be considered by Government.

Letter No. 1012/1 dated 5-2-1948 from the Sanitary Engineer, Bureau of Sanitary Engineer, Bangalore, to the Chief Engineer for Irrigation in Mysore, Bangalore

---

Re Water supply to Harihar town

In enclosing herewith a copy of D O letter No Ac 51/47-13 dated 26-1-1948 received from the Deputy Commissioner, Chitaldrug on the above subject, I have the honour to state that an A M estimate amounting to Rs 50,600/- for supplying water to Harihar town, the Mysore Military, the Kirloskar and the Mysore Railways from the Harihar Military Water Works was submitted to you in this office No 327 dated 28-12-47 The apportionment of cost between various consumers has also been noted in the estimate

The portion of cost to be met with by the Harihar Municipality viz , Rs 27,825/- per annum works out to a rate of 0-9-6 per 1,000 gallons of water consumed

If the Municipality is agreeable to meet the cost and on receipt of kind orders from you in the matter, I will take -- immediate action in supplying water to Harihar Until such time as orders are received in the matter, I am of the opinion that my presence at Harihar will not be helpful anyway But still I have included Harihar in my programme this month

I request you therefore to kindly communicate early orders so that I can address the various consumers viz ,

1. Harihar Municipality,
2. The Mysore Military,
3 Mysore Railways,
4 Kirloskars

regarding the acceptability of the A M charges

Early instructions are solicited

P T O

39

No. 765 dated 5-2-1948.

Copy of the foregoing is forwarded with compliments the Deputy Commissioner, Chitaldrug District, Chitaldrug with reference to his D O letter No A6 C.50/47-48 dated 26-1-48 and letter No A6 C.60/47-48 dated 27-1-48. The undersigned will be visiting Harihar this month and will take the opportunity of meeting the Deputy Commissioner at Chitaldrug

Notes on Water Supply to Harihar Town

Old arrangement -

Harihar town had an independent Water supply of its own from about the year 1904, the source of supply having been the river Tungabhadra The water from this was led into a well by means of a duct from which it was lifted by machinery and discharged through a rising main laid in the centre of the town to reservoir (low level) constructed above ground level at the highest point near Musafirkhana The Machinery last installed consisted of an oil engine set and the water was passed through a set of pressure Jewel Filters to improve the quality Since the rising main itself was used as the distribution mains the supply at the higher levels became scanty partucularly when the mumber of house connections at the lower level increased

History of Present arrangement - The machinery installed for the water works broke down in the year 1937 andsome other arrangement for water supply to the town had to be done immediatly

The water supply to Davangere Town is also drawn from the above River Thungabhadra and the pumping station is located close to that of the Harihar Water Supply so that the immediate and easiest means of affording relief to Harihar Town was by drawing the required supply from the rising main of Davangere The Municipal Council of Harihar therefore entered into an agreemant with the Davangere Municipality for purchasing water at five annas per thousand gallons and the water is being drawn from the mains of Davangere Water Works at the circle in Bangalore-Harihar Road into the reservoir direct(Just above ground level) and then distributed to the town by sub-mains This arrangement is in force even today This reservoir near the Musafirkhana is no doubt at the highest point so far as the old town is concerned Extensions have sprung up between this andthe Railway line and since the ground level

ground level at the extension is about the same as that of the reservoir it was found very difficult to maintain an adequate supply of water To tide over the cry of the public for adequate supply proposals were submitted to the Government for sanctioning an independent water Supply scheme to the town As this scheme was found too costly an alternative scheme was sanctioned by the Government at a cost of ruppes twentyfour thousands (Rs 24000) to be met in equal shares by Government and Municipality This scheme of improvement meant 1) construction of an elevated reservoir of 20,000 gallons capacity 2) Overhauling the distribution system 3) Pipe connection to the elevated reservoir from the Davangere Mains This work of improvements was completed by the Bureau of Sanitary Department two years back Even after this the supply has not been improved and the roar of the public for better supply is increasing day by day The Davangere Municipality was from the beginning giving supply of water for six hours daily which meant 60 000 gallons oer day but they have reduced the supply to four hours from about April 1946 on ground of great demand for water at Davangere The population of Harihar Town is now doubled in number over the census figure of 1941 and has increased to 16 000- This works to only 2½ gallons per day per head The supply is for limited hours and not sufficient to meet even the ordinary demand The Council cannot depend on the present arragement indefinitely as it is likely that the Davangere Municipality may cut off supply to Harihar Town at any time when they feel inadequaty of water supply in any portion of their town

To tide over these difficulties the Municipal Council approached the Government to move the Military authorities to hand over their machineray of water works(Stationed in the premises of our water works) at a reasonable cost to the Municipality and to make a free grant of Water Tanks, Pump house and other permanent fixtures in favour of the Municipality The cost of the Machinery proper was

proper was estimated at ₹s 30,000 The prayer of the Coucil have had no avail and this Military Water Works was taken possession of by the Mysore Government on 5-5-47 The bureau of Sanitary Department is now supplying water to the Mysore Military Camps and the Mysore Kirloskar at Harihar The Sanitary Engineer was addressed in the matter of arranging immediate water supply to this town He has intimated that the consolidated estimate for supplying water to Harihar town, the Kirloskar, The Military and the Railways is being got up and will be sent for acceptance The receipt of estimate is awaited

CONCLUSION There is no other go for the Municipality than to have its own independent supply by approaching Government to kindly transfer the charge of the water works under them to the Municipality free of cost considering the limited finances of the Municipality

OFFICE OF
THE MINISTER FOR
LOCAL SELF GOVERNMENT
No 1247
Dte 22-3-48

Dear Sir,

I am made to understand that the supply of water to Harihar Municipality is becoming more and more precarious and that the Davangere Municipality are going to stop supply water to Harihar Municipality from the 20th of this month - as the latter have not paid water charges due to the -- Davangere City Municipality.

22/3/48
Today.
Hon Secy to
Minister
22/3/48

The Sanitary Engineer came and saw me at Chitaldrug on the 16th morning He informed me that the Military Water - works which had been taken over by the Sanitary Department was being under-worked and that he could supply water to the Harihar Municipality at the rate of 0-9-6 per 1,000 gallons. This rate appears to be rather high and the Harihar Municipality which is too poor to pay this high rate, request that water may be supplied to them at a rate of 0-5-0 per 1,000 gallons. I am made to understand that this concession has been shown by Government to Narjungua and other Municipalities

I request that the same concession may kindly be - granted to Harihar Municipality also as its finances are anything by satisfactory. Pending settlement of the question - of rate, I request that the Chief Engineer for Irrigation may kindly be instructed to make immediate arrangements for - supply of water to Harihar town.

With best respects,

Yours sincerely,
H N Pallegar

Encl 1

From

K.T. Jambanna, Esq ,
President,
City Municipal Council,
Davangere

To

Syed Abdul Aleem, Esq. B A.,
Secretary to Government,
Revenue Department,
Bangalore

Sir,

In enclosing herein a copy of the resolution of the Municipal Council Davangere passed at its special general meeting held on 19-3-48, resolving to stop the supply of water to Harihar town from the 1st of April 1948 as there is dearth for water in Davangere City and to request Government to make immediate arrangements for the supply of water to Harihar town from the Military Water works at Harihar, I have the honour to state that the Municipal Council Davangere had agreed to supply water from the Davangere Water works at Harihar in the year 1938, when the population of the City was only 23,155. The present population of this City has increased abnormally since then and at present it is about 40,000. It is the obligatory duty of the Municipal Council to make arrangements for the adequate supply of water to the residents of the City Hence the Municipal Council feels that it is not possible to supply water to Harihar Town as it is its primery duty to look to the wel-fare of its own city residents rather than that of Harihar Town Besides the present pumping plant at Harihar does not possess the capacity to pump water to meet the normal demand of both Davangere City and Harihar Town Fortunately now there is the Military Pumping Station at Harihar, probably with not much of pumping work from which Harihar town can get water supply by paying normal cost of expenditure Thereby Davangere would have an additional supply of 60,000 to 90,000 gallons per day. This will surely meet nearly half the demand of this City residents

Under these circumstances I request you kindly to move the Government to consider the question immediately and cause to supply water to Harihar town from the Military Water Works at Harihar and to permit to stop water supply to Harihar as desired by the Council.

I have the honour to be,
Sir,
Your most obedient servant,

K J Jambanna
President,
City Municipal Council,
Davangere.

B.N.3/-

Proceedings of the Emergency special general meeting of the City Municipal Council, Davangere held on 19-3-48 at 5 P.M in the Municipal office

President.

K.T. Jabmanna, Esquire

x x x x

2) Consideration of the question of stopping of water supply to Harihar Town as there is insufficient supply of water to Davangere City by intimating the President, Harihar Municipality to arrange to take water from Military Water - Water works at Harihar and to - request Government to take further action in the matter

It is resolved that the ~~water~~ water supply to Harihar Town be stopped from the first of April 1948, as there is dearth of - water supply in the Davangere City and it is further resolved to request Government to make immediate arrangements for the supply of water to Harihar Town from the Military Water Works at Harihar

Sd/- K T Jambanna,

1 APR 1948
MUNICIPAL BRANCH

To

R. Chennaiga Ramiah, Esquire,
Minister for Local Self Government,
BANGALORE

1536,

Sir,

We, the president and members of the Harihar Town Municipal Council beg leave to lay before your honour the following representations for your kind consideration and redress

As your honour is well aware of we are depending upon the water supply to this town from Davangere Municipality we cannot depend indefinitely upon the present arrangement The Davangere Municipality may cut off supply to Harihar Town at any time when they feel inadequacy of water supply in any portion of their town They have now intimated us that the supply will be stopped from the 27th instant

To tide over the difficulties, the Municipal Council had no other go than to own its own water works With this point in view frequent representations were made to Government to kindly hand over the Military water works to the Municipality During your kind visit to this Town on 17-2-48, you were pleased to say, that the yearly maintenance charge of about Rs 27,825/- be borne by the Municipality and the supply of water to the Town may be taken from the Military water works, now in possession of the Bureau of Sanitary Engineering It is felt that this arrangement will not be beneficial to the Municipality

As there are two independent pumping stations, we pray that one of them (which formerly belonged to the Municipality) may be ordered to be handed over free to the Municipal Council to be maintained by themselves

Pending final orders of Government in the matter the Municipal Council is agreeable to take water from the

P T O

the Military Water Works at the rate of 0-5-0 per thousand gallons as recommended by the Deputy Commissioner The Municipal Council will bear the estimated cost of Rs 1375/- being the link connection to be given from the Military main to our reservoir

We earnestly pray that orders may kindly be passed to supply adequate supply of water to the Town - immediately from the Military Water Works The Sangameswara Cattle show commences in the Town from 28th instant and clamour of Public for water will increase in case good supply of water is not made

We, therefore, once again pray that orders be kindly issued to Supply water to the Town before the 28th instant

We remain,
SIR,
Yours Obediently,
M Mahabyappa

GENERAL & REVENUE SECRETARIAT
23 AUG 1948
1554
MUNICIPAL BRANCH

Sir,

Subject, Supply of water to Harihar town from Military water works at Harihar
====

With reference to your letter No L 1693 dated 17-5-1948 forwarding a copy of the representation dated the 25th March 1948 made by the members of the Harihar town Municipal Council to the Minister for Local-Self Govt on the above subject,for furnishing my opinion on the proposals made therein, I have the honour to state that the Harihar Municipal Council at their meeting held on 9-7-1948 have resolved to request Govt to settle the matter early in accordance with their previous resolution dated 3-3-48. On 3-3-48,they have accepted the temporary arrangements recommended by me to Govt in letter No A6 C 60/47-48 dated 15-2-1948 for charging at the rate of 0-5-0 per 1000gallons of water supplied The President of the Municipality requests that orders of Govt may be obtained to charge a rate of 0-5-0 per 1000 gallons of water supplied to the town till the question of handing over the water works free of cost to the Municipality is finally settled The Chief Engineer for Irrigation in his letter No 1886/S dated 14-2-1948 addressed to the Secretary to Govt P W D has stated that the Harihar Municipality will have to pay a sum of Rs 27,707/ per annum calculated at 0-0-6 per 1000 gallons of water supplied The normal income of the Municipality is only about 55000/ per year and the Municipality will not be able to pay the annual charges for water supply as intimated by the Chief Engineer for Irrigation The total cost on account of supply of 1,30,000 Gallons of water per day at the rate of 0-5-0 per thousand gallons comes up to Rs 14,828-2-0 per annum The Municipal Council has provided only a sum ofRs 9000/ in the drâft budget estimates of the Municipality for the year 1948-49 to meet the cost of water supplied and the extra cost of Rs 5828-2-0 will have tobe met out of the C B of the Municipality during the current year The Municipality was paying at the rate of 0-5-0 per 1000 gallons of water supplied from Davangere Water works till recently from the year 1937 It has been intimated by the Sanitary Engineer that water supply from the Military water works has been given to Harihar town from 29th March 1948 and the President of the Harihar

Municipability reports that water supply has been given from 4-4-1948 and the Sanitary Engineer has been requested to clarify the matter In the above circumstances, I request that sanction of Govt may kindly be obtained to supply water from the Military Water works to Harihar town at the rate of 0-5-0 per 1000 gallons

As regards the representation of the Municipal Council to handover free of cost to the Municipality one of the no doubt independant pumping station , I wish to state that it is very desirable that a growing town like Harihar should have a pumping station of its own.The Municipal Council has been repeatedly urging for handing over the Military water works to the Municipality since it is located in the premises of the old water works of the town But as it is intimated by the Chief Engineer for Irrigation that the annual maintenance charges of the Military water works will be Rs. 50,600/, I am of opinion that the Municipality may not be abbe to incur this heavy expenditure with its scanty resources and also manage the water supply to the other concerns Viz , M/s Kirloskar and Co ,Mysore Military and Railways The Best arrangement appears to be that Govt should manage the water works and supply water to the Municipality at a stipulated price I therefore request that the existing arrangements may continue for the present Copies of resolutions of the Harihar Municipal Council referred to above are enclosed herewith for kind information.

I have the honour to be,
Sir,
Your most obedient Servant,

Deputy Commissioner,Chit Dist

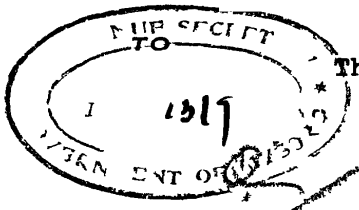
HARIHAR



The Secretary to the Government of Mysore
Revenue Department, BANGALORE

Sub - Regarding supply of water to Harihar from Military Water works

Sir

With reference to copy of letter No A6PR 509C/23836/47-48 dated the 16th August 1948 addressed to Government by the Deputy Commissioner, Chitaldrug recommending that a rate of Rs 0-5-0 per 1000 gallons may be sanctioned for water supplied to the Harihar Municipality from the Military water works at the place ~~etcetera~~, I have the honour to state that this was considered by the Muncipal council at its meeting held on 8-9-48 when it was resolved that the Government may be requested to kindly hand-over the water works to the Muncipality for the following reasons

1. The Sanitary Engineer in his letter No 661 dated the 11th ~~August 1948~~ September 47 has stated that the question of providing underground drinage to this town has to be deferred till such time as the Muncipality owns a water works of its own (Copy enclosed)

2. Since the town is extending day by day on account of its commercial and Industrial importance it is very essential that the underground drinage scheme has to be brought into effect as early as possible to reduce the incidence of Maleria In this connection it has to be stated that there is no suitable drinage existing in the town at present.

3. When the water works is handed over to the Muncipality the Muncipality will undertake to supply water to the Military, Railway, Kirloskar and other companies and recover proportionate charges from them The Muncipality will bear the ~~balance out of~~ the annual maintenance charges of Rs 50,600/- as intimated by the chief engineer, ~~A copy of the council~~ and realise income from the above institutions

A copy of the council resolution on this behalf is submitted herewith for kind perusal

Separate proposals will be submitted in respect of the underground drinage scheme

I request that all the facts may kindly be taken into consideration and the Government be pleased to order for handing over the water works to the Muncipality early

~~I have etcetera,~~ Yours faithfully

M Mahadevappa
President.

Bangalore 3 10th/11 September 47

JG

The Director of public Health
Bangalore

Sir,

Subject Under-ground Drainage Scheme to Harihar Town

With reference to my personal discussion with you on the above subject regarding the disposal of Harihar Town Sewage from the out falls and the feasibility of land treatment without pumping, I have the honour to state that I inspected Harihar Town in detail on 26 & 27

Harihar Town is situated on the bank of Tungabhadra River & is divided into two parts by a main ridge line running from east to west, thus necessitating a separate outfall for each portion of the town The general contour of the town is falling towards the river

The Septic tank at the end of the outfall to the South of the town is located at a distance of about 300 feet from the town This portion of the Septic tank has become obligatory, as the town has extended up to the bank of the river But even at the bank, the Sewage cannot be applied on land for treatment without resorting to pumping as the land on the other bank is also sloping towards the river The cheapest and simplest method of disposal would therefore be to lead the sewage into the

river

but this cannot be done without prejudice to the health
of the public especially because, the water supply intake
(both of Dalvanyore water works and Harihar Khetany
water works) is below the out fall drains other course
left open is to pump the sewage to the nearest available
land for treatment. This involves a heavy initial
and recurring expenditure as detailed later

The other Septic tank at the Northern outfall is located
far away from the town and is also far below and away
from the water supply intake of Dalvanyore and Haribar
water works, I have ascertained that there are no villages
lower down on the bank of the river for a distance of about
10 miles from the outfall Hence there is no chance of the
river water being used in this distance I feel therefore,
that the sewage from this outfall may be let into the
river after Septic tank treatment & Chlorination This is
suggested in view of the heavy cost involved in pumping
& what has end the feasibility of land treatment
was investigated. The nearest available land is about
3000 ft from the Septic tank & pumping will have to be
resorted to. To lay the sewage to the opposite bank also
does not solve the problem as the land slopes towards
the river itself

If pumping the sewage is decided upon
the capital cost would be 1 75 lakhs as already intimated
and the recurring charges for maintaining the installations
will be Rs 15,000/ per annum as per enclosed details Thus
the total cost of the underground drainage scheme to Haribar
town will Rs 2 75 lakhs with an annual recurring charges
expenditure of Rs 15000/

I am however, of the opinion, that an
underground drainage scheme to Haribar town at such
a heavy cost need not be taken up in the immediate
future for the following reasons —

1) The first and the foremost pre requisite of an efficient underground drainage Scheme is profuse water Supply, Hanthar Town which has a population of about 15000 does not have an independent water Supply installation The town is buying water from Davanagere water works to the extent of about 60,000 gallons per day which works out to about 4 gallons per capita per day This Supply will have to be increased to at least 15 to 20 gallons per capita per day before an underground drainage scheme can be thought of Hence an independent water Supply Scheme to the town has to be immediately thought of

2) If an underground drainage Scheme is worked out, full advantage of the Same should be taken by connecting every house to the underground drainage System In the case of Hanthar Town, this cannot be done as the town is very ill laid out In most of the localities, the houses are in a block, back to back and shoulder to shoulder, Secondly, the majority of the houses are built of mud walls with thatched or country tiled roofing & do not have latrines It is therefore, very unlikely these houses take advantage of the underground drainage system

3) Although, the question of cost does not come in when the health of the public is taken into consideration, the financial position of the Municipality has to be considered while taking this costly Scheme The Hanthar Municipality Could not finance a Surface drainage Scheme at a cost of Rs 22,700/- & they seem to owe nearly Rs 15000/- to the Davanagere Municipality for water Supplied to them by the latter

The Municipality has to find resources for taking up the water Supply Scheme which is most important

b) Lastly, even if the underground Drainage Scheme is worked out the Municipality will find it practically impossible to maintain two independent pumping installations for pumping the Sewage for land treatment

under these circumstances, I once again recommend that the underground Drainage Scheme to Hanhar Town may be over, until at least the Layout of the Town is improved & an independent water Supply Scheme worked out with a per capita distribution of at least 15 to 20 gallons per head.

On receipt of your Considered opinion in this Connection I will forward the Scheme sent back by you duly incorporating the pumping arrangements also if necessary

Thanking etc

Sd/ K S Krishnaswamy
Sanitary Engineer

No 342/2 & 119 47

Copy of the above is Submitted to the Chief Engineer for roads and Buildings with reference to correspondence ending with his No 2826/C & 47 Under the circumstances explained, the Government may kindly be addressed to defer the question of under-ground Drainage Scheme of Hanhar town for the present

Hanhar Town Municipality

Letter No 1886/S dated 14th February 1948 from the Chief Engineer for Irrigation in Mysore, Bangalore, to the Secretary to Government, Public Works Department, Bangalore

---

Military water works at Harihar—annual maintenance estimate for working the plant to its full capacity and supplying water to various consumers

---

Adverting to para 2 of Government Order No P W 4478-80/WS 17-42-3 dated 1-10-1947, I have the honor to state that it is reported by the Sanitary Engineer that the plant is now working for about 4 hours only supplying about 40,000 gallons of water per day to the Military and the Kirlosker Co , Ltd only In addition to this demand the requirement of the Harihar Municipality will be 1,30,000 gallons per day A further quantity of 10,000 gallons per day will be required by the Railway authorities for water supply to their colony and passengers In all about 1,80,000 gallons per day will be the ultimate requirements and the present plant with some improvements can satisfy this demand by working for about 18 hours in the day on two shifts of 9 hours each and it can supply water to the Harihar Town and the Mysore State Railway also as per details noted in the margin

1 Harihar	1,30,000	gallons per day
2 Military	30,000	"
3 Kirlosker	10,000	"
4 Railways ..	10,000	"

The improvements to be effected to the plant have been incorporated in the comprehensive estimate which will be forwarded separately

An annual maintenance estimate amounting to Rs 50,600/- for working the plant to its full capacity of 1,80,000 gallons per day is received from the Sanitary Engineer and is herewith enclosed

The report accompanying the estimate explains the necessity for the work the provisions made therein and the details regarding the apportionment of cost

The apportionment of cost among the various consumers is noted below -

1	Harihar Municipality	Rs 27,707 at 0-9-6 per	1000 gallons supplied
2	Mysore Military	" 17,043 at 1-9-3	-do-
3	M/s Kirlosker & Co ,	" 2,925 at 0-13-0	-do-
4	Railways	" 2,925 at 0-13-0	-do-

Before Harihar Municipality and Railway Authorities take water from the Military Water Works, they will have to carry out independently small works such as, laying of pipe line and connecting it with the

existing Military Main etc The cost of these works has to be borne by them and is not included either in the comprehensive estimate or in the annual maintenance estimate I request you to be so good as to obtain and communicate approval of Government to the apportionment of the maintenance cost of Rs 50,600/- referred to above so that the several consumers might be addressed in the matter of their concurrence to the proposal.

Subj: water supply to Hanhar Tn from the Military water works at Hanhar

Sir, With reference to the correspondence ending with your letter no AB & R 509 C 2836/47-48 dated 16-8-48 on the above subject, I am directed to state that the Govt are pleased to approve of ~~accept~~ your recommendation to continue the existing arrangement of the water works at Hanhar being managed by the Govt (Bureau of Sanitary Engineering) and water being supplied to the Hanhar Town Mly at the stipulated price of Rs 0-5-0 for every thousand gallons of water supplied, as the Hanhar Town Mtee is not in a position to maintain the water works fully with its slender resources

Yours faithfully
